

CopyShop

This my friend is a what you would call a FSU VST, all it does is chopping up buffers and plays them back. of-course you can choose the length of the piece of audio played back and when to apply it.

Installation

On windows, unzip and place in your vst directory. On OS X unzip and put it in your /Library/Audio/Plug-Ins/VST/ folder.

What does it do?

Blargh its hard to explain what it does, throw it into your DAW feed it some audio and press the little button. Then tweak the big knob. then press the button again, that's how it works and what it does pretty simple.

For your convenience I've added a few short cuts to set the played back pieces to rhythmically valid values, these are hidden (as in not shown in the GUI) but rather to be automated (I love playing with them on my padKONTROL).

If you want to donate me money, please do, but you don't have to, and I really don't expect you to either, I'm really releasing this as a show off for what GetaBlitch SR can do (among a lot of other things)

Special Thank to Aaron Spectre of Drumcorps <http://www.drumcorps.cc/>

Copyright and stuff like that

The CopyShop is copyright ©2006 by me, Johan Larsby. CopyShop is freeware, meaning you can use it as you like, be ye hobbyist or professional. You may, however, not distribute the plug-in for any sort of financial compensation whatsoever. If you want to put this on a CD and distribute it with your fancy magazine you have to contact me to get my mailing address to send me out a copy. Oh, and I'm not liable for any damage whatsoever that CopyShop might do to your hardware... or wetware....
